SUMMARY

Junior QA Automation Engineer with hands-on experience building automated UI and API tests using C#, Playwright and Selenium across two independent practice projects. Comfortable with Page Object Model, BDD (Reqnroll/Gherkin), REST API testing, SQL validation and Azure DevOps CI/CD pipelines. Actively uses AI tools to speed up test design and automation coding, then reviews and validates the output. Completed a 400-hour intensive automation program at EPAM; motivated to bring this foundation to a paid QA Automation role.

EXPERIENCE

QA Automation Trainee

EPAM
06/2026 – Present

Project: Web-based Board Games Platform

- Built an automated UI test suite (Playwright, Selenium WebDriver) that expanded regression coverage of core user flows, cutting down the amount of manual re-testing needed before each release.
- Automated REST API testing with Postman and Playwright API, surfacing integration issues earlier in the pipeline instead of relying on manual checks later.
- Implemented BDD scenarios using Reqnroll (Gherkin), making test scenarios readable for non-technical stakeholders and easier for mentors to review.
- Configured test execution within Azure DevOps CI/CD pipelines so automated tests run on every build automatically, removing a manual step from the workflow.

Project: E-commerce Clothing Platform

- Audited the application to identify functionality with no test coverage, closing gaps that previously relied on inconsistent manual checks.
- Built and maintained a UI automation suite (Selenium/Playwright, .NET) covering search, cart and checkout — the core, revenue-critical user paths.
- Used AI tools to speed up test-case drafting and automation scripting, shortening the time from 'gap found' to 'automated test in place', while reviewing and adapting generated code to match framework and coding standards.

Collaborated with mentors and team members using Agile methodology across both projects.

SKILLS

Languages: C#

Frameworks: Playwright, Selenium, Reqnroll

Tools: Jira, Postman, JMeter, Azure DevOps, Git

AI-assisted testing: prompt-based test case & script generation, AI coding assistants

EDUCATION

Software Engineering

The Bohdan Khmelnytsky National University of Cherkasy

09/2024 – Present · Bachelor's degree

CERTIFICATES

Automated Testing in .NET

EPAM

06/2026

C# Advanced and .NET Fundamentals / Test Automation with .NET Advanced / Clean Code / Generative AI for Productivity / CloudX: Foundations for Tech — Program level Specialization

LANGUAGES

English — Upper-Intermediate
